

Citizen and Machine Learning-aided high-resolution mapping of urban heat exposure and stress

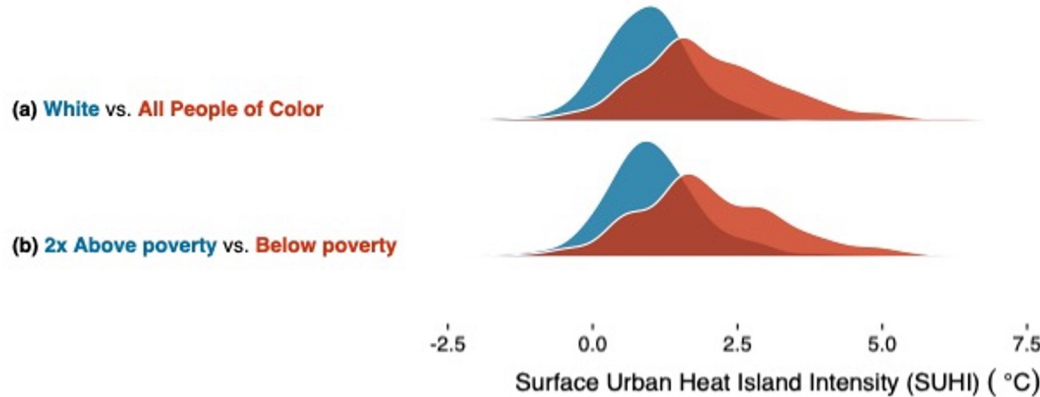

Wang, X., Hsu, A., & Chakraborty, T. (2023). Citizen and machine learning-aided high-resolution mapping of urban heat exposure and stress. *Environmental Research: Infrastructure and Sustainability*. <https://doi.org/10.1088/2634-4505/acef57>

Presenter: Xuewei Wang, July, 2023

RECAP OF UHI AND HOW TO MEASURE IT

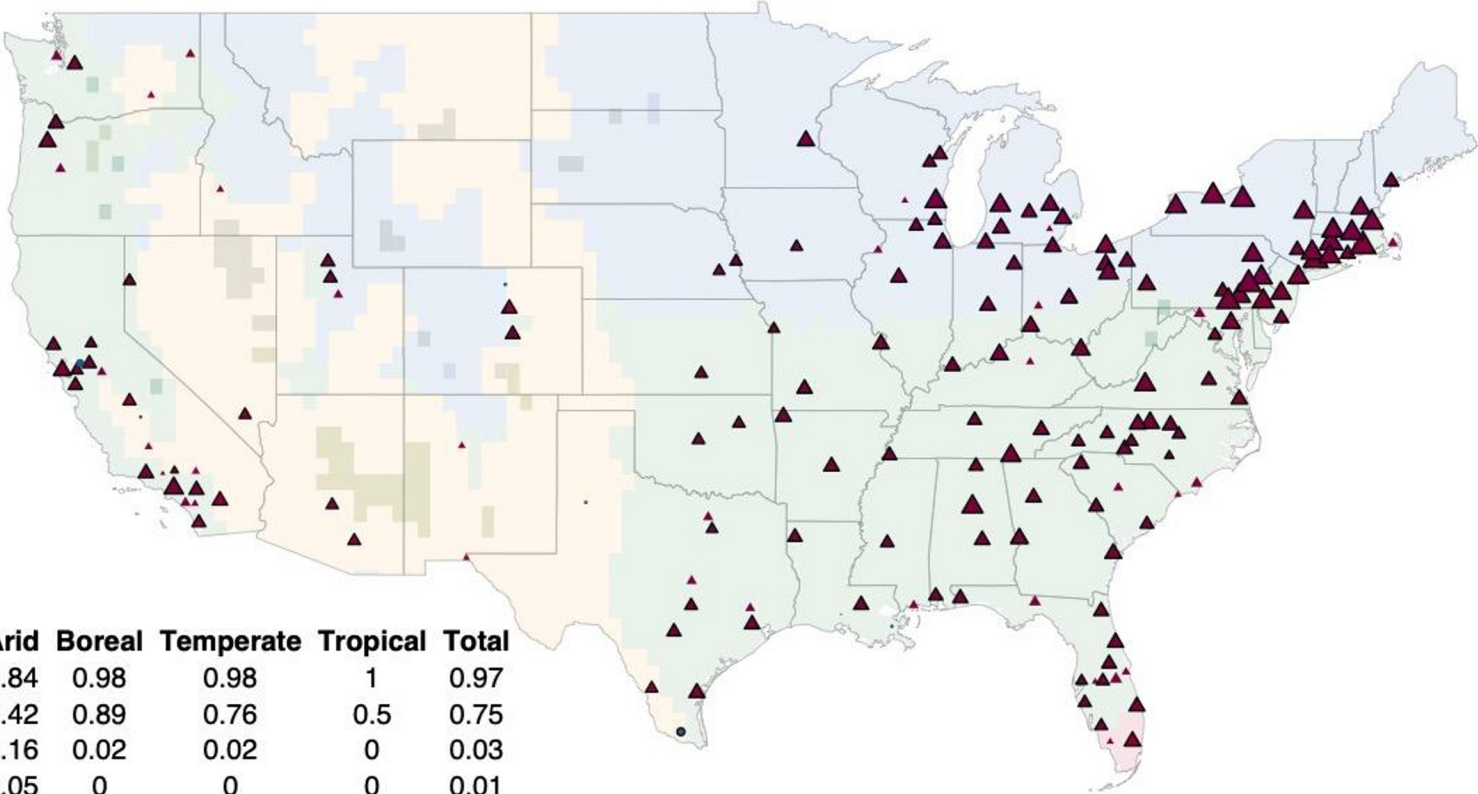

PATTERNS OF URBAN HEAT ISLAND DISPARITIES

Hsu, A., Sheriff, G., Chakraborty, T. et al. Publisher Correction: Disproportionate exposure to urban heat island intensity across major US cities. *Nat Commun* 12, 4104 (2021). <https://doi.org/10.1038/s41467-021-23972-6>

- In most major U.S. cities, populations in red exposed to higher urban heat island intensity than populations in blue.
- Exposure patterns virtually identical for populations c) Below poverty and People of Color.
- Distributions for age alone similar, except when combined with race (g-h).

97% MAJOR US CITIES – EXPOSE MINORITY POPULATIONS TO HIGHER URBAN HEAT ISLAND INTENSITY

UHI Difference (°C) · 0 · 0.5 · 1.0 · 1.5 ● 3.5
