

Building the bridge between ENSO theories and operational predictions

Ben Kirtman

University of Miami - RSMAS

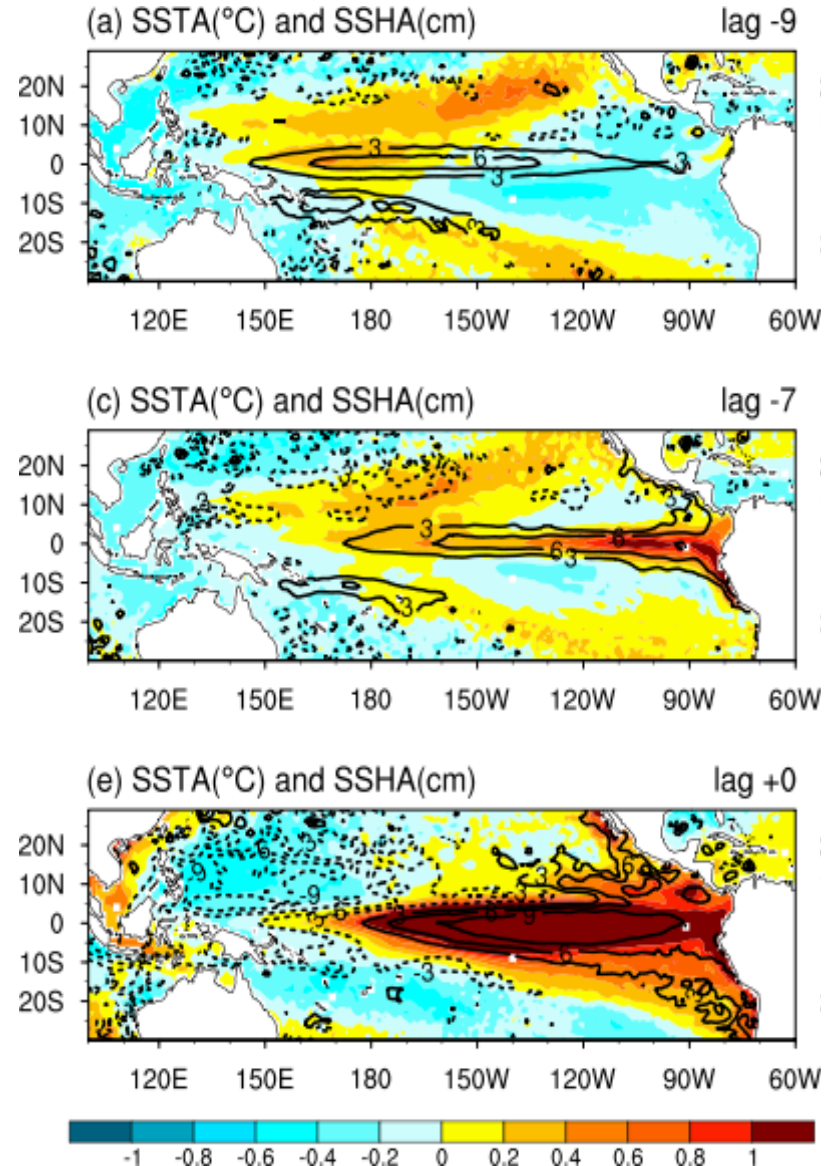

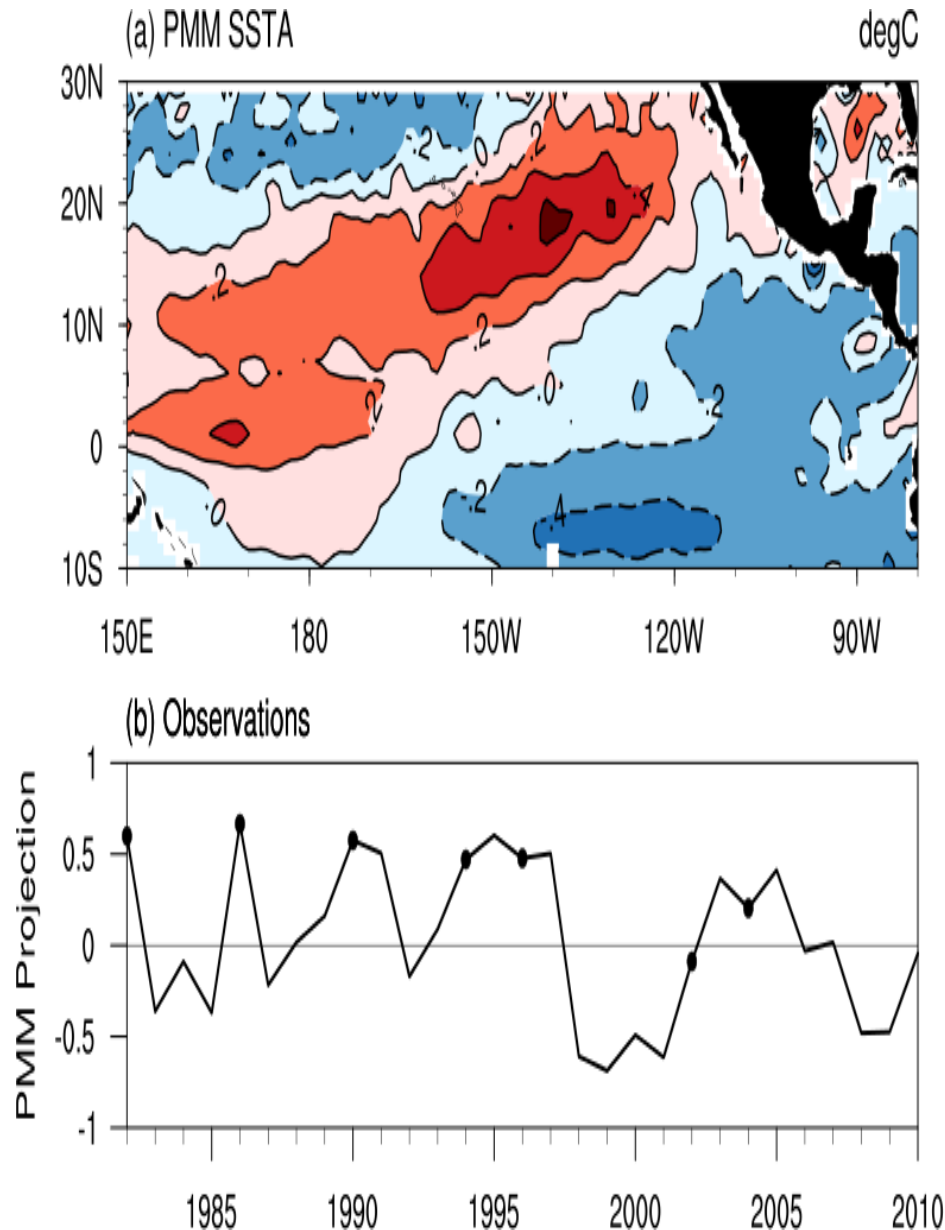

Motivation

- **NRC Assessment of Intraseasonal to Interannual Climate Prediction and Predictability**
 - “Predictability is used *qualitatively* ... processes that improve Forecast quality”
 - Not possible to quantify the true limit of predictability for the climate system
 - Quantitative statements about the lower bound possible
- **Approach in NRC Assessment is Understandable but Unsatisfying**
 - Difficult to see how predictability research impacts operational forecasts

Bridging Predictability to Prediction

- **Mantra: Marry Predictability and Prediction**
- **Examples:**
 - **Pacific Meridional Mode as ENSO Trigger**
 - **Westerly Wind Bursts and Forecast Quality**
 - **ENSO Diversity**
 - **Coupled Instability and Forecast Spread**
- **Outstanding Problems**

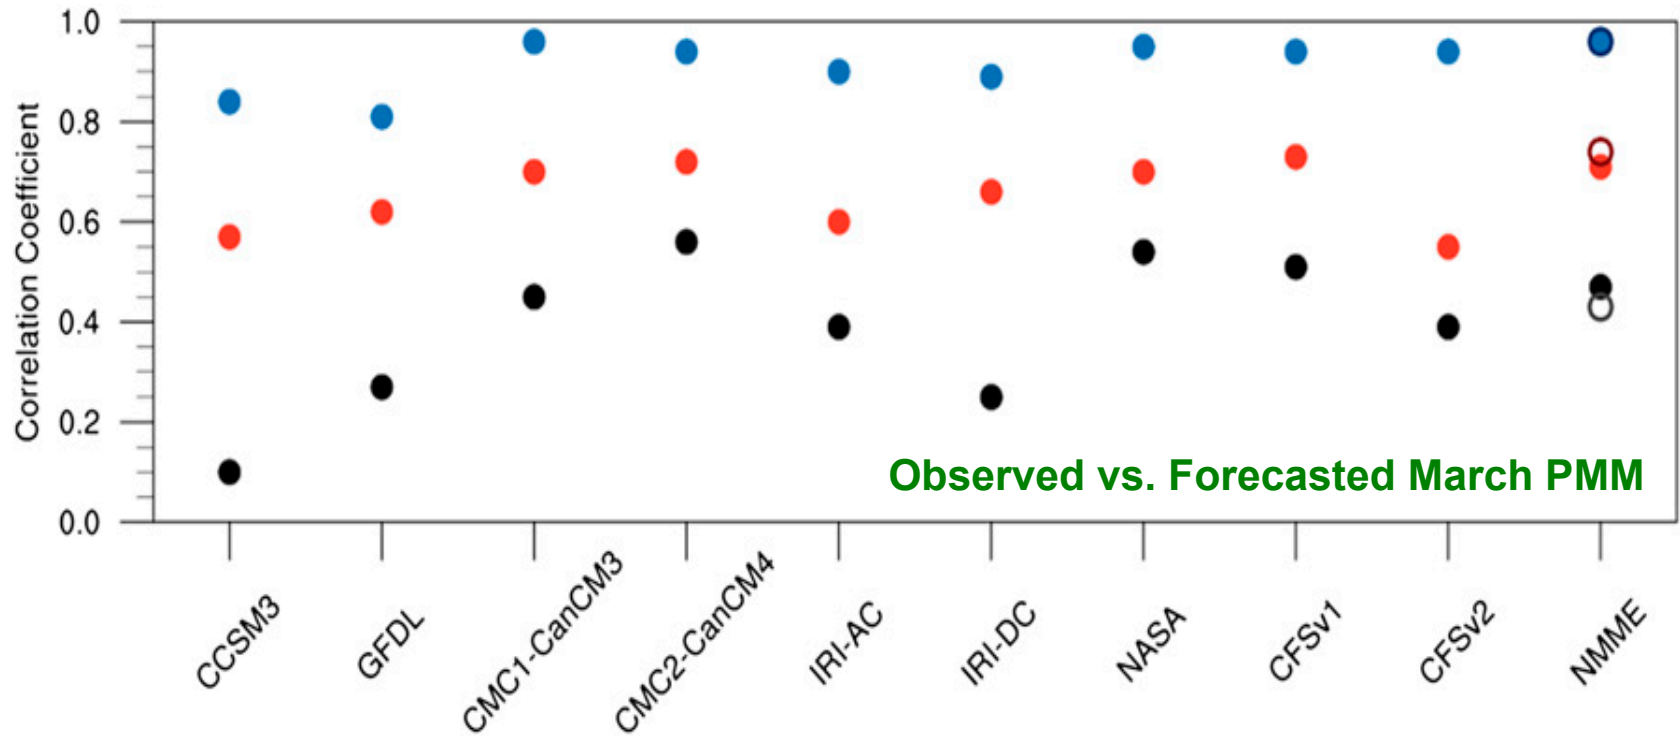

PPM ENSO Trigger

Larson and Kirtman 2013, GRL

Larson and Kirtman 2014, JCLim

Can PMM be Predicted?

(a) March Initialized Forecasts

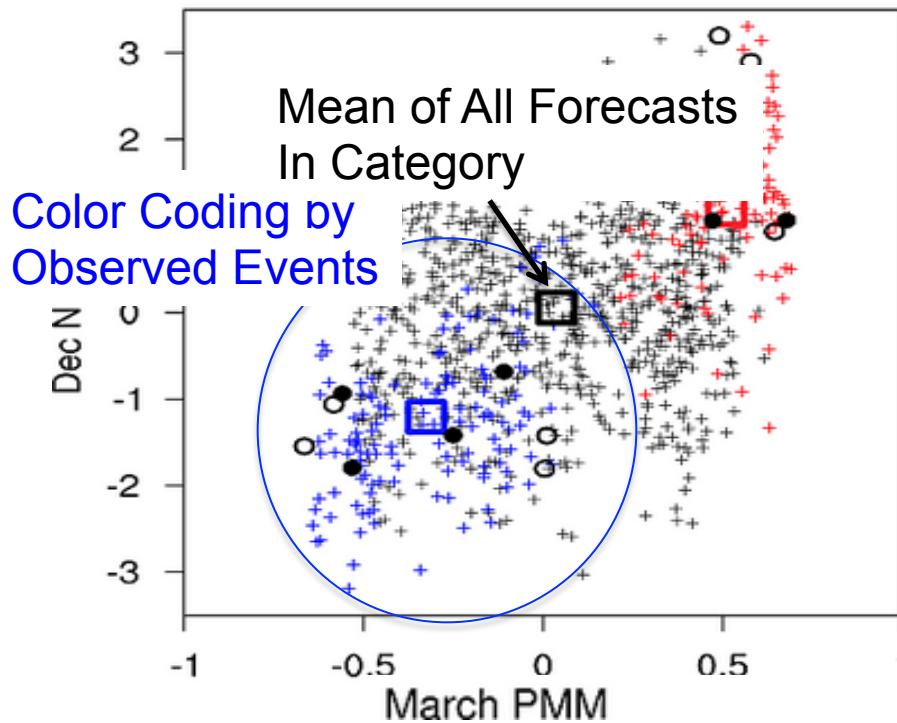

(b) March Initialized Forecasts

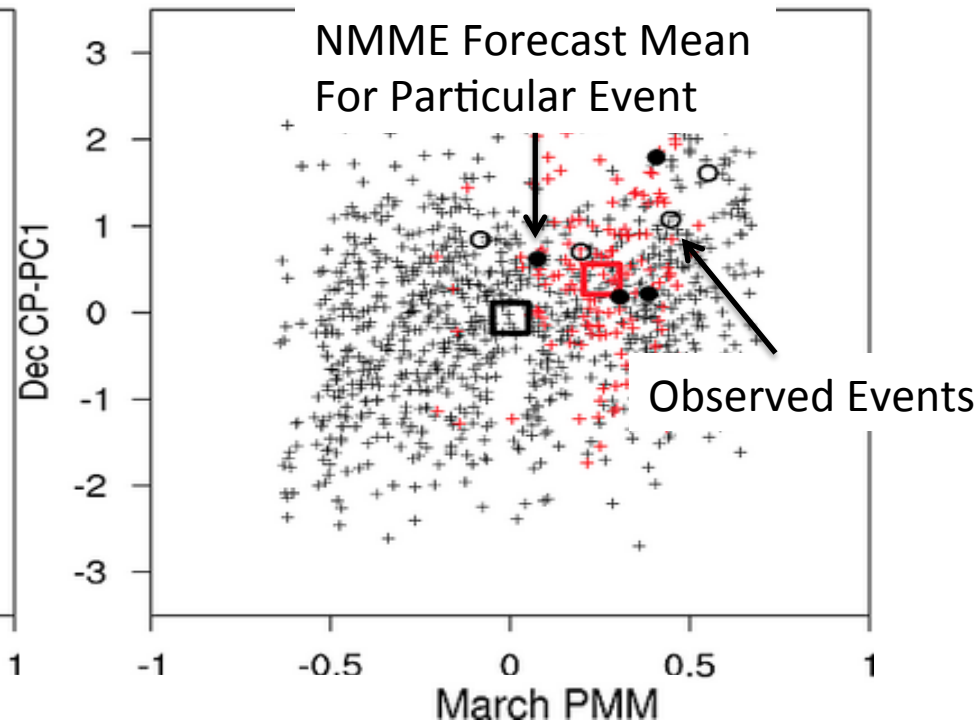

Model Initialization Month	PMM Phase	ENSO Index Threshold	% Correct Observed ENSO	% Correct ENSO Forecast
March	+ Forecast (Upper tercile forecast)	+ NINO-3 (Upper tercile NINO-3)	53% (56%)	63% (48%)
March	- Forecast (Lower tercile forecast)	- NINO-3 (Lower tercile NINO-3)	79% (34%)	61% (52%)
March	+ Forecast (Upper tercile forecast)	+ CP Index (Upper tercile CP index)	78% (44%)	57% (43%)
---	+ Observed (Upper tercile observed)	+ NINO-3 (Upper tercile NINO-3)	47% (60%)	---
---	- Observed (Lower tercile observed)	- NINO-3 (Lower tercile NINO-3)	71% (25%)	---
---	+ Observed (Upper tercile observed)	+ CP Index (Upper tercile CP index)	73% (40%)	---

(a) March Initialized Forecasts

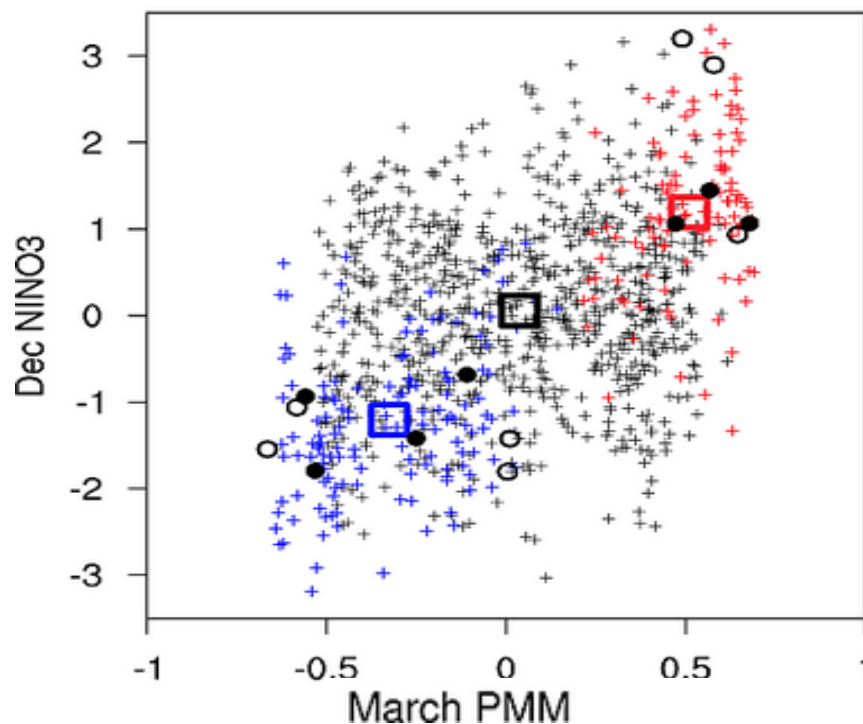

(b) March Initialized Forecasts

Model Initialization Month	PMM Phase	ENSO Index Threshold	% Correct <i>Observed</i> <i>ENSO</i>	% Correct <i>ENSO</i> <i>Forecast</i>
March	+ Forecast (Upper tercile forecast)	+ NINO-3 (Upper tercile NINO-3)	53% (56%)	63% (48%)
March	- Forecast (Lower tercile forecast)	- NINO-3 (Lower tercile NINO-3)	79% (34%)	61% (52%)
March	+ Forecast (Upper tercile forecast)	+ CP Index (Upper tercile CP index)	78% (44%)	57% (43%)
---	+ Observed (Upper tercile observed)	+ NINO-3 (Upper tercile NINO-3)	47% (60%)	---
---	- Observed (Lower tercile observed)	- NINO-3 (Lower tercile NINO-3)	71% (25%)	---
---	+ Observed (Upper tercile observed)	+ CP Index (Upper tercile CP index)	73% (40%)	---

NMME Nino34 Forecasts: 9 Month lead; Ensemble Mean

NMME Nino34 Forecasts: 9 Month lead; Spread*3

forecast reference time

Outstanding Problems

- **Able to Use Predictions to Inform Predictability, but the Reverse?**
- **How to Define a “Skillful” Probabilistic Forecast**
 - Was the 2014 ENSO Forecast Anomalously Bad?
 - Tension between “Spread” and “Sharpness”
- **Forecast of the Forecast Skill**
 - State Dependent Skill Mask
 - Why are Dynamic Forecasts So Over-Confident
- **Forecast Problem is about Getting the Details Right**
 - Forecast Evolution
 - ENSO Diversity
- **Weather within Climate**
 - Sub-seasonal Statistics
 - Extremes
- **Trends**
