

Changing Arctic: How It's Affecting Our Weather

An evening lecture

Thursday, February 2, 2017

6:00 – 8:00 p.m.

Naval Heritage Center
701 Pennsylvania Ave NW
Washington, DC 20004

Profound changes in the Arctic have coincided with more frequent extreme weather events across the mid-latitudes, such as Washington, DC. These events include intense heat and rainfall, and severe winter cold spells and snow storms. Scientists are actively addressing if and how Arctic change is connected to these events, which affect economies, geopolitics, security, and society at large.

This evening lecture will feature experts discussing scientists' understanding of these events and the impact this has on society. An opening reception will provide networking opportunities before the lecture.
